

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

Having to simply take the logic in the original function and insert it in a factory function which returns the function that contains the logic.

---

2. What parts of encapsulating your logic were hard?

None. I just initially thought it would be complicated

---

3. Is abstracting the book preview a good or bad idea? Why?

I don't necessarily see the difference as the only thing I had to do is encapsulate the function in another function which returns it. The major change I see in the book app is the addition of books, which does not change anything in the code
